13. Describe Proposed or Completed Operations

It is proposed to follow the originally approved plug and abandonment procedure of the subject well through Step #3 but to modify Step #4 in the following manner:

The cement retainer cited in Step #4 will be set at 2100'. The wellbore will then be perforated from 2080-2086' and a water injection/falloff test performed. It is then intended to increase the amount of cement spotted on top of the cement retainer for Plug #1 (Step #4) to 7 sx of cement to include 100% excess volume across the perforated interval. It is then intended to follow the remaining portion of the plug and abandon procedure as originally approved.
