(Field)

San Juan  
(County or Subdivision)

New Mexico  
(State or Territory)

The elevation of the derrick floor above sea level is 6194 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

We propose to workover the above well as follows:

1. Move in and rig up workover rig.
2. Clean out hole with gas to total depth, or whipstock hole if necessary.
3. Run 5" liner to total depth and cement.
4. Drill out cement and perforate selected zones.
5. Stimulate with sand-water frac.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
