DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The above well was converted to a water injection well on May 10, 1963 as follows:

1. Hot oiled casing annulus and pumped back load.
2. Moved in and rigged up pulling unit and pulled rods and pump.
3. Ran casing scraper on tubing and circulated hole clean with injection water.
4. Displaced water with treated water, worked water over perforations by alternately pumping down annulus and tubing.
5. Ran 2-3/8" tubing with Baker Model N packer set at 1612'.
6. Hooked up to injection system and started injecting water down tubing and annulus into lower and upper Gallup zones on May 10, 1963.

I understand that this plan of work must receive approval in writing by the Geological Survey before work is commenced.
