December 13, 1954Well No. 1 is located 406 ft. from [N] line and 323 ft. from [W] line of sec. 4B/A Section 4
(1/4 Sec. and Sec. No.)30N
(Twp.)9E
(Range)RPN
(Meridian)Blanco
(Field)San Juan
(County or Subdivision)New Mexico
(State or Territory)The elevation of the derrick floor above sea level is 6233 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

In accordance with the report on Supplementary Well History on the Middle #1, approved by the U.S.G.S. as of January 8, 1953, a larger rig was moved over this well on 12-10-54 to recover a fish, consisting of 21 joints of 2 tubing, and deepen the well into the Point Lookout formation.

Several days were used in an unsuccessful attempt to recover the above mentioned fish.

It is now the intention of El Paso Natural Gas to change plans as follows.

1. Discontinue the attempt to recover the fish.
2. Move up into the casing 100' above the csg. shoe & mill a 15' window.
3. Set a whipstock and orient it so that a 6 1/8 hole will be drilled in an easterly direction.
4. Drill through the Point Lookout form. and sand-oil zone. Est. T.D. 5440'.
5. The whipstock will be prepared so that the present production from the ~~Point Lookout~~ House formation may still be produced through the casing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
