RESEARCH DESIGN

1. The first step in the process of the investigation is the identification of the problem. This is done by the investigator who is responsible for the investigation. The investigator must identify the problem and the scope of the investigation. The investigator must also identify the objectives of the investigation and the methods to be used. The investigator must also identify the resources available for the investigation.

1. The first step in the process of identifying a problem is to determine the nature of the problem. This involves gathering information about the problem and its context. The second step is to define the problem in terms of specific, measurable, and achievable goals. The third step is to identify the causes of the problem. The fourth step is to develop a plan of action to address the problem. The fifth step is to implement the plan and monitor progress. The sixth step is to evaluate the results and make adjustments as needed.
