Re: Abrams #1, J-5-30N-11W

Gentlemen:

A recent field inspection reveals that the referenced well is leaking gas at the surface, outside the surface pipe. All vegetation on location is dead indicating gas is surfacing over a fairly large area.

You are directed to dig out around the surface pipe to check for leaks. The gas may be coming from a flow line leak. This should also be checked out. The bradenhead valve is leaking salt water and should be changed. Please initiate this action as soon as possible.

Yours truly,
