(Meridian)

Undesignated Fruitland  
(Field)

San Juan  
(County or Subdivision)

New Mexico  
(State or Territory)

The elevation of the derrick floor above sea level is 5740 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It was originally intended to complete this well in the Pictured Cliffs formation. However, the Pictured Cliffs formation was found to be non-commercial after fracture treatment. A cast iron bridge plug was then set, above the Pictured Cliffs perforations, at 2050' and the Fruitland formation perforated and fractured. The Fruitland formation has been found to be commercial; therefore, it is planned to temporarily abandon the Pictured Cliffs formation and complete in the Fruitland as follows:

1. With 50 feet of free sand on top of bridge plug at 2050', plug back to 1950' with 7 sacks cement.
2. Run tubing to top of cement plug.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
