1. *Phylogenetic relationships*—Phylogenetic relationships among the 12 species were determined using the parsimony method of Farris (1993) with the computer program PAUP (version 4.0). The parsimony analysis was performed using 1000 random addition sequence replicates and 1000 random deletion sequence replicates. The parsimony analysis was performed using the following settings: heuristic search, 1000 random addition sequence replicates, 1000 random deletion sequence replicates, and 1000 random deletion sequence replicates.
