17. Attached to this report are findings and conclusions regarding structural, functional, and physical details, and, if applicable, safety, including evidence of any of them, that have been noted. If you are disagreeing, please describe the conditions and identified and the vertical depths for all markers and show your work. *

1. Spot cement plug across perfs 2314 to 2340, top of plug at 2280'.
2. Performate Gjo Mono at 1300' and squeeze with 50 sxs. Spot 100' plug inside pipe.
3. Squeeze Bradenford with 50 sxs.
4. Spot 10' plug at surface.
5. Install dry hole marker.
6. Clean location.

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group and the experimental group. The control group received a standard 12-week training program, while the experimental group received a 12-week training program with a 4-week pre-training period. The subjects were then divided into two subgroups: the control subgroup and the experimental subgroup. The control subgroup received a standard 12-week training program, while the experimental subgroup received a 12-week training program with a 4-week pre-training period. The subjects were then divided into two subgroups: the control subgroup and the experimental subgroup. The control subgroup received a standard 12-week training program, while the experimental subgroup received a 12-week training program with a 4-week pre-training period.
