*If well is abandoned, clearly state all pertinent details, and give pertinent dates, including estimated date of start-up and completion of well. If well is abandoned, give subsurface locations and measured and true vertical depths to all markers and some pertinent data.

ARCO 101 and 102 Company respectfully requests approval of existing well and term shut-in status on this well. Over the past two years, ARCO has been tested several previously uneconomic long term shut-in wells and found commercial production. In addition, an ongoing CO2 feasibility study is under way which may yield significant additional oil recovery. Implementation of a CO2 flood would require the workover of existing wells, and the drilling of new wells. For these reasons, ARCO proposes that this well be maintained in the long term shut-in status so that the wellbore will be available, should future production tests indicate commercial production or should it be needed as part of a future CO2 flood. This plan eliminates the economic waste of potentially usable wellbores and promotes conservation.
