The elevation of the derrick floor above sea level is \_\_\_\_\_ ft. To be determined.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Propose to: Pull drill pipe presently in hole and set an open hole bridge plug below the top of the Cliff House stringer formation. After setting bridge plug, we plan to set a 30-foot Calseal plug on top of it, then bleed off the pressure above this plug and run and cement a string of 5½" casing below the top of the Cliff House formation.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
