The elevation of the derrick floor above sea level is 6688 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is intended to drill a well with rotary tools through the Mesaverde formation, drilling the pay section with gas circulation, and to shoot the entire Mesaverde with approximately 2 quarts of S.N.G. per foot. Estimated total depth 5900'.

Casing Program:

9-5/8", 25.4#, set at 170' with 125 sacks. Cement circulated to surface.  
7", 20# & 23#, set at 5275' with 500 sacks of cement with 3# Gel and 1 lb. floccs per sack of cement.

The S $\frac{1}{2}$  of Section 8 is dedicated to this well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
