DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

9-5/8" casing was set at 3700' with 800 sacks 6% gel cement followed by 100 sacks neat cement. Lost returns during last 20 barrel displacement at 1600 psi. Did not circulate cement. Top cement 150' by temperature survey. After waiting on cement, casing and water shut off were tested with 1200 psi for thirty minutes, which held with no indication of pressure drop. Reduced hole to 8-3/4" at 3700' and resumed drilling operations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
