DETAILS OF WORK

(State names of and expected depths to productive sands; show sizes, weights, and lengths of proposed casings; indicate modifying jobs, cementing points, and all other important proposed work)

Well shut-in 5-14-64 to 5-27-64. Ran tracer survey. Puled tubing. Set bridge plug at 6490' on wireline. Ran tubing and set packer at 6490'. Swabbed to BHP, 54.2 in 4 days. On 6-2-64 acidized with 2500 gallons. Flowed back load oil and acid water. Flowed 200 bbls. fluid per day, cut 99% water, 18/64 ch, BHP 100-150 psi. Ran tracer survey. Shut well in 6-7-64. It is proposed to set a sand packer, which will prevent any pressure on the wellhead, and temporarily shut in well.

I hereby certify that this plan of work must receive approval in writing by the Geological Survey before it is carried out.
