proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones perti-

It is intended to dually complete this well by pulling the
tubing and setting a drillable bridge plug above the Mesa
Verde perforations. The casing will be tested to 3500 psi,
and the Pictured Cliffs formation selectively perforated
and sandwater fractured. Following clean out, dual tubing
strings will be run and the producing formations isolated
with a production packer.

Attached is a well location plat showing the dedication of
the Pictured Cliffs formation.
