Mr. Charlie Perrin
Deputy O & G Inspector
Oil Conservation Division
1000 Rio Brazos Road
Aztec, NM 87410

Dear Charlie,

Attached is a copy of the Letter you sent Chester Deal at our Farmington Office Jan 13, 2000. The letter is regarding the Clayton 1E, P-02-30N-12W (API 30-045-23534) and its non-compliance with Rule 201. B.

This well is dualled with the Gallup formation (please see attached well bore diagram). The Clayton 1E Gallup is one of the better producers that we have at +/- 225 MCFD. (See attached production plot). In order to be in compliance with Rule 201. B. for the Dakota formation I am worried that we may jeopardize the Gallup producing interval.

As you can see from the well bore diagram the Baker Model D packer is set just below the Gallup perforations. The Model D is not retrievable and must be milled. Our experience with milling packers tells us that even utilizing gas to drill we will have trouble circulating (The Gallup zone has a very low bottom hole pressure...see plot) in order to mill packer. There is also not sufficient room between the Gallup perms and the Model D packer to do a conventional cement squeeze below a retainer set above the packer without risking damage to the Gallup zone.

We respect the need to comply with all RulesI am not sure how to proceed here with our risking production from the Gallup zone. At your convenience I would like to visit with you about our options on this well.

Thanks for your consideration.

Sincerely,

Brian D. Voigt
