Dear Mr. Foust:

Please find enclosed for your approval the following site security plan to safeguard the tank from over flowing into the Glade Wash. My proposal is to dig a pit 15' long, 12' Wide and 5' deep to adequately hold 300 bbl. of water. There is a lot of vandalism in the glade, a pit would provide protection against someone opening the valve on the bottom of the tank and for evaporation in case of emergency, also a 2" drain line will be installed inside the dike around the tank in case someone shoots a hole in the tank it would drain into the pit. A 2" overflow line will be installed to the top of the tank to the pit in case of tank overflow.

The pit will be lined with a standard mill plastic liner and a sensor will be installed under the plastic to detect any leaks. The pit will be fenced on all sides. This should element any problems from water getting into the soil.

Sincerely,

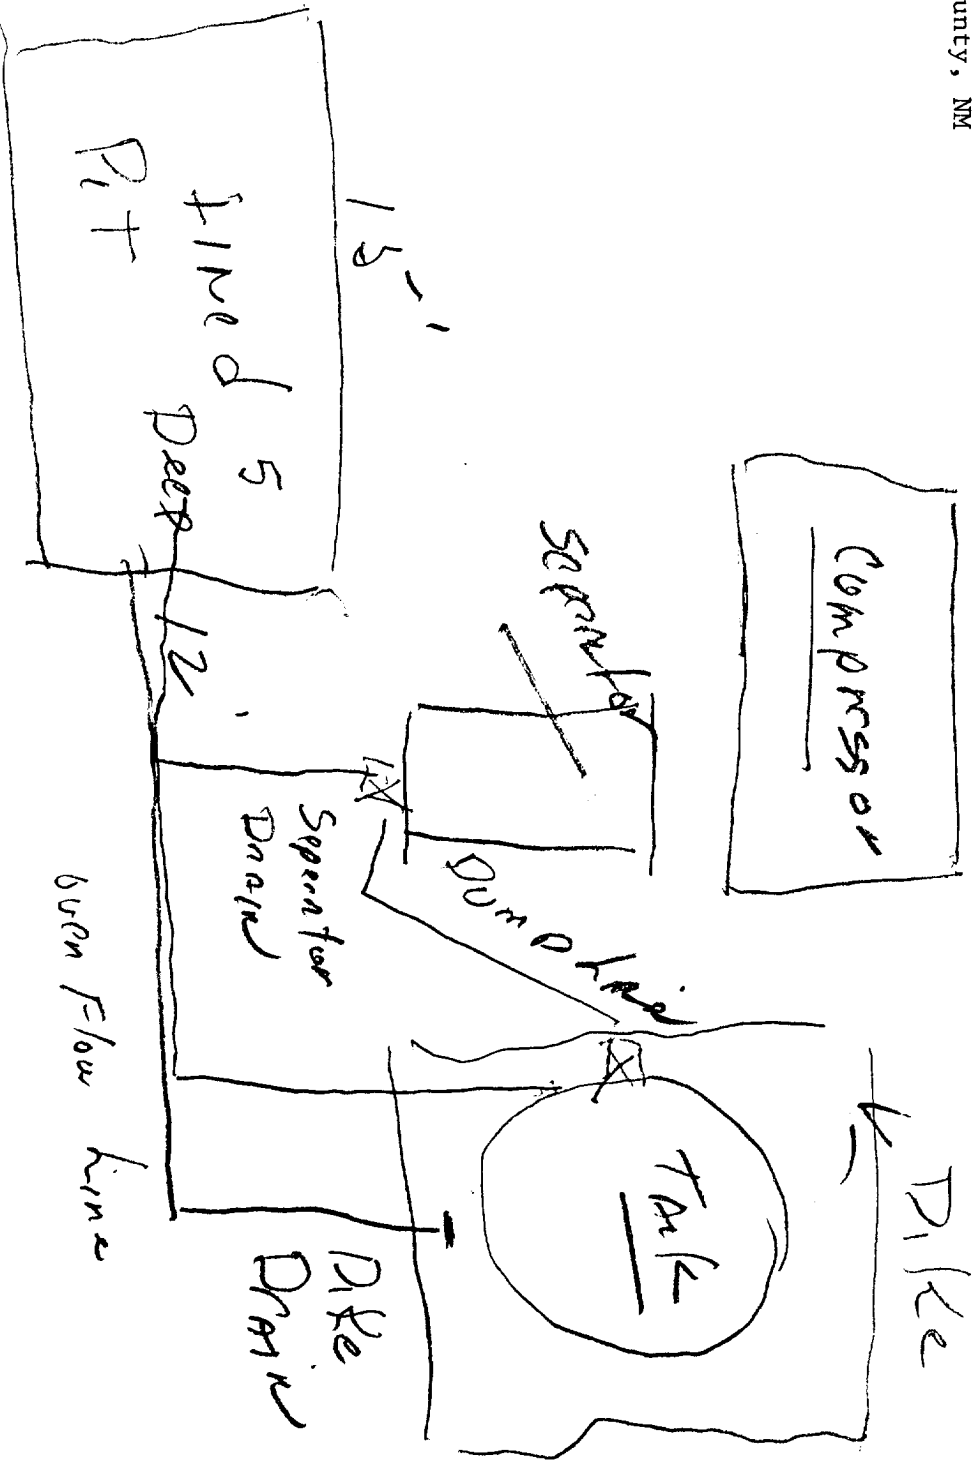

James L. Ludwick
