13. Describe Proposed or Completed Operations (Clearly state all pertinent dates, including estimated date of starting any proposed well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to th

Plans are to bury a cathodic cable 12 to 18 inches in the ground from a proposed A.C. power source located in the SE SW Sec. 16, T.31 N., R.7 W. The cable will be routed along an existing Williams Field Service pipeline and access road to the NEBU 416 well location as shown on the attached map. The cable will be laid in the bar ditch of the existing access road. The purpose of this undertaking is to provide cathodic protection for the NEBU 416 and NEBU 57 well casings and their associated pipelines. No right-of-way clearing will be required and the cable will be plowed in with the use of a ripper tooth on a ditch witch. All surface disturbance will be confined to the existing 50 foot right-of-way. A ground bed will also be installed on this line as shown on the attached map. The ground bed will be drilled with a small truck mounted rig and will not require any blading. It will be drilled with air and will not require a water pit. This project will be 3,000. feet in length and on Bureau of Land Management and State lands.
