☐ New Construction

☐ Non-Routine Fracturing

☐ Water Shut-Off

☐ Conversion to Injection

13. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Devon Energy proposes to clean out and recavitate the Nebu #446. At the completion of the recavitation procedures, a 6 1/4" diameter hole will be drilled to a point 100 feet below the Pictured Cliffs top (3200'). A non-perforated and bull plugged liner will be suspended through this interval with an external casing packer at the Pictured Cliffs top. A pre-drilled and plugged liner will run from the external casing packer to the 7" casing. The external casing packer will isolate the Pictured Cliffs from the Fruitland Coal. The non-perforated and bull plugged liner will act as a sump for an artificial water lift system.
