13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)\*

Vastar converted the subject well to Annular/ csg flow in an attempt to increase gas flow rates. Snubbing techniques were used to avoid killing the well. The 3 1/2", 9.3#, J-55, EUE 8rd tbg, Guiberson UNI-VI PKR and tailpipe were pulled from the well and the 3 1/8"X 3000# Christmas tree NU to the tbg head. Test wellhead seals with 3000psi-test o.k. Surface modifications will be made to the wellhead and flowline to allow the well to produce thru the Christmas tree and the tbg head valves. A revised wellbore diagram is attached and details the downhole configuration. Operations started on 01/24/00 and were completed on 01/25/00 and the well returned to production.
