13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

This well was drilled and completed in 1990 and a 5-1/2" 23# uncemented liner was run during the completion operations. Plans are to pull the tubing and liner, cleanout to TD, recavitate the coal interval, possibly run a new 5-1/2" liner, perforate, land tubing and return well to production. A brief description of the work planned is as follows:

MIRU. Install BPV & ND tree. NU & test BOP. Retrieve BPV. POOH w/tubing. Pull 5-1/2" liner. RIH w/bit on 3-1/2" DP & cleanout to TD. PU & recavitate coal interval. POOH. It hasn't been decided if a liner will be run back in hole, but if it is, they will run new 5-1/2" 15.5# liner with hanger & packer. Set liner on bottom. Set hanger and packer. If required RU wireline & perforate liner. RIH with tubing and land. Set BPV. ND BOP & NU & test tree. Retrieve BPV and return well to production.

A 25' X 60' lined (3 sided fenced) pit will be utilized during workover as well as a blow down pit.
