13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleate horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleation in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

During Dakota Payadd work in May a DV Tool opposite the Cliffhouse formation failed and took most of the fracture stimulation treatment intended for the Dakota formation. At that time verbal approval was received allowing both the Mesaverde and Dakota formations to produce. Now we intend to go back and re-frac the Dakota and formally add the Mesaverde and Lewis formations in this well. Right now we have no cement behind our 4-1/2" casing from the bottom of the Menefee formation to the top of the Cliffhouse, so one block squeeze will be needed to separate our two stage Mesaverde completion. It is intended to recompleate the Mesaverde and Lewis formations as follows:

- >Isolate the leaking DV Tool with a straddle-packer.
- >Re-Frac the Dakota formation with slickwater.
- >Set a bridge plug above the Dakota.
- >Shoot 2 squeeze holes at 5,350' (bottom of the Menefee formation).
- >Block squeeze under a retainer at 5,350'.

14. I hereby certify that the foregoing is true and correct. <b>Electronic Submission #6279 verified by the BLM Well Information System For BURLINGTON RESOURCES OIL &amp; GAS, sent to the Farmington Committed to AFMSS for processing by Lucy Bee on 08/13/2001 ( )</b>

**Additional data for EC transaction #6279 that would not fit on the form**

**32. Additional remarks, continued**

- >Set another cement retainer at 4,800', just above the leaking DV Tool.
- >Squeeze the DV Tool.
- >Drill out and test both squeezes.
- >Perf and frac the Point Lookout. Set bridge plug.
- >Perf and frac the Cliffhouse / Menefee. Set bridge plug.
- >Drill out and clean up the entire wellbore.
- >Return to production.
