The elevation of the derrick floor above sea level is 3518 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Ute Mountain Tribal "A" Well No. 3. On April 2, 1958, 5-1/2" casing was set at 3425' with 215 sacks of cement with 100 pounds gilsonite per sack, followed by 153 sacks neat cement. Plugged after displacement with 20 barrels oil leaving 2620' cement in casing. Pressured up to 3000 pounds with no circulation or movement of cement. Estimated top cement outside 5-1/2" casing at 2350'. Drilled out cement to 3426'. Set 70' cement plug 3355' - 3425'. After waiting on cement for five days, a two hour bailer test was run to check water shut off. Casing was dry.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
