Aztec, New Mexico

Dear Sirs:

We submit herewith the completed deliverability test on Anderson-Prichard Oil Corp., Johnston Well No. 2.

The shut-in period was five hours short of the required seven day period and the test was conducted with a choke in operation between the well and meter. We believe the test to be an accurate representation of the wells ability to produce and request that the test be used as the annual test. In any event we would like to use it as the required forth-five day test following work-over and re-run the annual test on your request.

Yours very truly,

L.W. McGlothlin
