(Meridian)

Verde-Gallup
(Field)

San Juan

(County or Subdivision)

New Mexico

(State or Territory)

The elevation of the derrick floor above sea level is 5566 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging, cementing points, and all other important proposed work)

We propose to drill the above well with rotary tools to an approximate total depth of 3500'. Well is to be drilled sufficiently deep to evaluate all possible productive Gallup sands. Completion procedure will be dependent upon results of natural tests.

Proposed casing program:

| SIZE | AMOUNT | CEMENT | REMARKS |
|--------|--------|--------|--|
| 8-5/8" | 400' | --- | Heat--circulate to surface. |
| 5-1/2" | 3500' | --- | Oil string casing to be set to total depth through |

Gallup sand and cemented by high column job with light weight cement slurry to bring cement across Point Lookout - Mancoos contact. A temperature survey will be run to verify cement fill-up.

Location plats are attached. Upon completion of well, copies of any logs run will be submitted.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
