(County or Subdivision)

New Mexico  
(State or Territory)

OIL CON. COM.  
DIST. 3

The elevation of the derrick floor above sea level is \_\_\_\_\_ ft. (To be reported later.)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill the above well with rotary tools to an approximate total depth of 3000' and test the Gallup formation. Completion procedure will be dependent upon results of natural tests.

Proposed casing program:

SIZE	AMOUNT	CEMENT	REMARKS
9-5/8"	200'	-----	Heat - circulate to surface.
5-1/2"	3000'	-----	The 5 1/2" production string will be cemented by the

2-stage method so that the Point Lockout - Muncie will be covered by cement. Stage cellar will be set approximately 300' above top pay.

Location plats are attached. Upon completion of well, copies of any logs run will be submitted.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
