DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a Gallup formation test at the above location using cable tools from surface to total depth, setting 10-3/4" casing to approximately 90' and circulating cement. Drill out with 10" bit to approximately 580', where a protective string of 8-5/8" casing will be set without cementing if necessary to shut off possible water flows in the Mancos. Drill 8" hole to an estimated total depth of 2015'. 5-1/2" production casing will be set if the Gallup is found productive.

All work will be done in accordance with the Rules and Regulations of the UBOB and the New Mexico Oil and Gas Conservation Commission.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
