(Field)

San Juan  
(County or Subdivision)

New Mexico  
(State or Territory)

The elevation of the ground above sea level is 1535 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Present total depth of this well is 1955' with 4 1/2" casing set at 1909'. The well is producing through 2 horizontal fractures at 1461' and 1463' in the upper Gailup sand. We propose to deepen this well to approximately 1450' to test for possible buildup of the lower Gailup sand. If commercial production is found, a 2-7/8" O.D. 8.95 J-55 liner will be run from approximately 1910' to T.D. If no lower sand is encountered the well will be plugged back to 1900'.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

**WORKING WITH THE POLICE**

[illegible]

1. The first step in the process of the investigation is the identification of the problem. This is done by the investigator who is responsible for the investigation. The investigator must identify the problem and the scope of the investigation. The next step is the collection of data. This is done by the investigator who is responsible for the investigation. The investigator must collect data from the sources that are available. The next step is the analysis of the data. This is done by the investigator who is responsible for the investigation. The investigator must analyze the data and determine the cause of the problem. The next step is the development of a solution. This is done by the investigator who is responsible for the investigation. The investigator must develop a solution that will solve the problem. The next step is the implementation of the solution. This is done by the investigator who is responsible for the investigation. The investigator must implement the solution and monitor the results. The final step is the evaluation of the results. This is done by the investigator who is responsible for the investigation. The investigator must evaluate the results and determine if the problem has been solved.
