

HISTORY OF OIL OR GAS WELL - Continued

was 2070 psi.; shot-in pressure on the Mesa Verde Section (casing) was 997 psi.; through 3/4" Thornehill-Graver positive choke, the Dakota Section tested 1,514 MCF per day; no further leakage or communication was observed. On May 6, 1957, the Mesa Verde Section tested 1,643 MCF per day through 3/4" Thornehill-Graver positive choke; again no further leakage or communication was observed. On May 12, 1957, a string of 1" was run to 3000' parallel to the 2-1/2" tubing and the well was shot-in to wait for pipe line connection.
