DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well is perforated from 1296' to 1322' with 6 1/2 holes in the upper Gallup formation. We propose to convert this well to water injection as part of a secondary recovery project. Water will be injected through 2" tubing below a packer.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
