DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to drill with rotary tools to a depth of 100+ feet, set 9-5/8" casing and cement to surface 5/100+ sec. Thereafter to drill with rotary tools to the top of the producing zone, run electric log and run 5-1/2" casing and cement with approximately 50 sec. Thereafter to drill in with cable tools, run GHI log, free through casing with 20,000 gallons of crude and 20,000 sand; swab and test well with cable tool rig until daily rate of production is established, and complete. The SW 1/4 of the section, containing 40 acres, more or less, is dedicated to the well site. Estimated total depth: 2,750 feet.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
