DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to drill a wildcat test of the Dakota Sand Formation to an approximate total depth of 3500'. It is planned to set approximately 300' of 8-5/8" OD surface casing cemented to the surface. If commercial production is encountered 5-1/2" OD oil string will be used. All producing horizons will be adequately tested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
