If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Unit production declined to 27 30PD which is below the economic limit. Injection stopped to reduce expenses and evaluate unit performance without injection. This well was shut in 3-29-73. U.S.G.S. approved Supplemental Plan of Development 1-23-73. This well is in a Unit. Waterflood operations have been temporarily suspended. Future plans are to conduct waterflood and tertiary recovery studies. These studies may result in a revised waterflood plan or in a tertiary recovery program that may require the use of this well in order to recover the maximum amount of oil from this reservoir.
