25. List of Attachments

I hereby certify that the information shown on both sides of this form is true and complete to the best of my knowledge and belief.

**Signed By**

During execution of the file, within the appropriate function, call one of the `File` functions listed below. Once you finish the completion of any new or still open file, call `FileClose`. If you are using a mode that requires a type of character set, call `FileSetCharSet` before you open the new file and call `FileGetCharSet` before you close the file. In the case of file formats, call `FileGetFormat`. All other functions in the `File` namespace follow the same naming convention: still open files have words of "open" and closed files have words of "close" and "get" are used to obtain information. The only exception to this is the `FileGetFormat` function, which is used to get the file format. The format is set in the file. The update file name and the update file name are required, and the file is updated.
