13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

This facility retains seasonal surface-water from natural snow-melt & rainwater. The facility is sloped and bermed to contain this water. When an excess of surface water accumulates, the water must be drained thru a below-grade valve-box @ the SW corner of the facility.

The water is NOT produced water of any sort & contains zero additives with no visible sheen to it's surface. The volume to drain is estimated to be @ 75' X 60' X 1" deep (@ 67 bbls).

We would like to drain the water again March 3rd @ 900 hours. Any subsequent drainage will continue to be proceeded by a 24 hour pre-notification using a BLM sundry notice.
