13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

This facility retains seasonal surface-water from natural run-off from rainwater. The facility is sloped and bermed to contain this water. When an excess of surface water accumulates, the water must be drained thru a below-grade valve-box @ the SW corner of the facility. A cemented spill was built to prevent any erosion when draining.

The water is NOT produced water of any sort & contains zero additives with no visible sheen to it's surface. The pool of water is triangular in shape - 60' on each side with a depth varying from 1/4" to 9" deep. It is estimated that the volume of water to be drained is approx. 70 bbls.

Phillips plans on draining this water this week. Verbal approval was given by Bill Liess (BLM). Any subsequent drainage will continue to be proceeded by a 24 hour pre-notification using a BLM sundry notice.

14. I hereby certify that the foregoing is true and correct
