13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

This facility retains seasonal surface-water from natural run-off from rainwater. The facility is sloped and bermed to contain this water. When an excess of surface water accumulates, the water must be drained through a below-grade valve box @ on the SW corner of the facility. A cement spill was built to prevent any erosion when draining.

The water is NOT produced water of any sort and contains zero additives with no visible sheen to it's surface. The pool of water is triangular in shape - 60' X 60' X 50' with depth varying from 6" to 1" deep. It is estimated that the volume of water to be drained is 534 bbls.

Phillips plans on draining this water Tuesday August 18 @ 12:00 pm. Bill Liess (BLM) was given 24 hour notice. Any subsequent drainage will continue to be preceded by a 24 hour pre-notification using a BLM sundry notice.
