Re: Aztec Oil & Gas Company's
Granier No. 3

Southern Union Gas Company
P. O. Box 757
Farmington, New Mexico

Attention: Mr. Rodney Heath

Dear Rodney:

Our records show that the 1955 deliverability test on the referenced well was completed April 16, 1955. This deliverability was calculated to be 170 MCF/Day.

Immediately following this test period, a well-head intermitter was installed. During the month of November, a non-official production test was run, and the deliverability was calculated to be 322 MCF/Day. The production records over the past eight months show an average rate of 286 MCF/Day at an average pressure of 515 psi.

From the above data we believe that the subject well has been cleaned sufficiently by the intermitter to warrant either a re-test or a production test.

Very truly yours,

AZTEC OIL & GAS COMPANY

Bill R. Hastings
Production Engineer
