DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Operator proposes to drill a well to total depth of 8000' to test the entire Pennsylvanian section for oil and/or gas. The following is a brief outline of the proposed work:

Casing program: Set approximately 275' 13 3/8" - 48# H-40 surface casing with sufficient cement to circulate. Will drill 7 7/8" hole to Molos formation at TD 8000'. If productive, will run 5 1/2" casing from surface to TD.

Coring program: Plan on coring the Tocito formation at approximately 800' and Paradox formation at approximately 7750'.

Other proposed work: Will drill hole with conventional type drilling mud and will run electric log and micro log from base of surface casing to TD.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
