DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Spudded 5-27-63. Set 7" casing @ 13' cutd with 10 sacks cement circulated. Drilled 6 3/4" hole to 1468' with air cut 13' core to 1463', eight feet Gallup pay. While landing hole with oil had flash fire which destroyed surface equipment. No damage to well. Plan to run rat hole, run log, run 4 1/2", 9.25, 12-40 casing, cement with sufficient cement to cover approximately 130' above producing zone. Will perforate the interval 1472-1476' and sand fracture with loose crude (approx. 20,000 gal) and 20,000, 20-40 mesh sand. Zone to be perforated and pump tested before fracturing.

(Letter to follow on explanation of fire)

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
