PLUG AND ABANDONMENT PROCEDURE

9-30-97

Vasaly #3

Blanco Pictured Cliffs **DPNO 80870** 2310' FSL and 2310' FWL / SW, Sec. 31, T32N, R11W San Juan County, New Mexico

Note: All cement volumes use 100% excess outside pipe and 50' excess inside. The stabilizing wellbore fluid will be 8.3 ppg, sufficient to balance all exposed formation pressures.

- Install and test location rig anchors. Prepare blow pit. Comply with all NMOCD, BLM, 1. and Burlington safety regulations.
- MOL and RU daylight pulling unit. Conduct safety meeting for all personnel on location. 2. NU relief line. Blow down well and kill with water as necessary. ND wellhead and NU BOP. Test BOP.
- POH and LD 1" tubing (3015'). PU 2" tubing workstring. Run 4-1/2" gauge ring to 2980'. 3
- Plug #1 (Pictured Cliffs perforations and Fruitland top, 2980' 2580'): Set 4-1/2" 4. wireline CIBP at 2980'. RIH with open ended tubing and tag plug. Load casing with water. Pressure test casing to 500#. If casing does not test, then spot or tag subsequent plugs as appropriate. Mix 35 sxs Class B cement and spot a balance plug above the CIBP to isolate the Pictured Cliffs perforations and cover the Fruitland top. POH with tubing.
- Plug #2 (Kirtland and Ojo Alamo tops, 1311' 1190'): Perforate 3 squeeze holes at 5. 1311' Establish rate into squeeze holes if casing tested. PU 4-1/2" wireline cement retainer and RIH; set at 1261'. RIH with tubing, sting into retainer and then establish rate into squeeze holes. Mix 42 sxs Class B cement and squeeze 29 sxs cement outside 4-1/2" casing and leave 15 sxs cement inside casing to cover Ojo Alamo top. POH and LD tubing.
- Plug #3 (8-5/8" Casing Shoe at 98'): Perforate 2 squeeze holes at 148'. Establish 6. circulation out bradenhead valve. Mix and pump approximately 43 sxs Class B cement down 4-1/2" casing, circulate good cement out bradenhead valve. Shut in well and WOC.
- ND BOP and cut off wellhead below surface casing. Install P&A marker to comply with 7. regulations. RD, MOL, cut off anchors, and restore location.
