13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Unfortunately work performed on the A #8 to put this well back on production proved unsuccessful. However, Conoco is currently pursuing research in a new tight Fruitland Coal stimulation technique, which is essentially a "compressed air burn out flow back frac" stimulation, which has shown promise on OH completions, as well as cased hole applications. With this research & application still being in the "early" stages of development Conoco proposes to T&A the A #8 during the research/evaluation interim. The following proposed procedure will used:

1. RIH W/bit & Scraper to 2600' POOH
2. RIH w/CIBP & set @ 2260' (top perf @ 2299')
3. PU & circulate hole with pkr fluid to surface, POOH
4. Pressure tst casing to 500 psig. Cut chart for BLM
