The elevation of the derrick floor above sea level is _____ ft. Will be furnished later.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

We propose to drill with rotary tools to the Cliffhouse Sand and set 7" casing. Cable tools will be employed to drill thru the Cliffhouse, therefore and to all lookout formations with a gas completion in the Point lookout. Well will be shot with solidified nitro in the Point lookout.

Casing proposed as follows:

250' of 1-3/4" 21.7 lb casing ———— Circulate cement to surface.
4350' of 7" 21 lb 23 lb casing ———— 20 sacks of regular cement
1300' of 2-1/2" 21 lb 21.7 lb casing ———— Drilling string.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Well spudded October 26, 1950.

Ran 215 feet 10-3/4" - 32.75' casing on October 17, 1950.

Cement circulated to the surface. Plug was drilled out on October 28, 1950 after waiting 24 hours for cement to set.

Prior to drilling the plug the casing was tested for water shut-off with 500 psi. Pressure was held for 30 minutes with no indicated drop.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

1

On December 1, 1930 re-cemented with 1/2 sack of cement and 1 sack of cement, with retained cement at 3,213 feet. Formation took water at 1 1/2". Cement squeezed at 7:00 to 8:00. All cement out of casing at completion.

On December 1, 1930 ran 1/2 sacks cement, 1 sack gel, 1 sack cement.

Drilled in with cable tools. On December 10, 1930 Halliburton tested well at 3,677 feet, for 15 minutes with 1,000 lbs. held 2. 1.

Took off 7" gas valve, installed control head, and resumed drilling with cable tools.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Hole bailed dry after drilling plug and tested for water shut off. No water.

Drilled by cable tools to total depth of 4,950 feet below surface. Shot with 570 quarts solidified nitro. Top of shot at 4,800 feet. Shot off 2:30 p.m. on January 1, 1951. Cleared out, and tested through 7" casing. Tested 500,000 cu. ft. natural. Tested 3,500,000 cu. ft. 27 hours after shot.

Run 4,850 feet of 2" tubing, L.701, J-51. Well shut in after plug, and true level set.

Well now tested to date through 2" tubing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
