DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Test: 300' Mesquite (NM)

Should we hit oil, when we drill, we plan to set 50' of 5 1/2" surface casing and set it with 8 SKS of cement. When + if we complete, we will set 2 7/8" tubing 15' thru our production sands (if any) and cement thru our production sands with approx. 3 SKS of cement. We plan to then perforate our production zone (if any) with 1 band + of acid on the perforating gun to clean our sands. Then we plan to set the pump and tank, if necessary.
 Our hole is 4 3/4" -

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
