Well No. 1 is located 990 ft. from W line and 330 ft. from S line of sec. 20

SW $\frac{1}{4}$ Sec. 20 26N 2E NMDM

($\frac{1}{4}$ Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Wildcat Rio Arriba New Mexico

(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 7825 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

I propose to drill a well to test the Pennsylvanian and Mississippian strata or a depth of 3,000 feet whichever is the ~~greater~~ lesser. Rotary tools will be used. Since hard sandstone outcrops on the surface and there is no ground water it is proposed to set a minimum of 100 feet of surface pipe. In the event of commercial production I propose to use 5 $\frac{1}{2}$ inch producing string.

* cemented to surface

10 3/4 inch 32# Surface Pipe

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
