Farlington, New Mexico, December 14, 1951

Well No. 1 is located 660 ft. from DN line and 1980 ft. from E line of sec. 11

1/4, Section 11 1-11-4 1-4-4 11N
(4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Alamogordo Doña Ana New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 4353 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Reference is made to Form 9-311a, approved October 26, 1951, Notice of Intention to repair well.

Cable tools were used in November 9, 1951, to test the Fruitland formation. Hailed down water in 2-3/8" casing. Well made approximately 16 gallons of water per hour. Perforated 2-3/8" casing from 2970 to 3115 feet with one shaped charge per foot. There was a very slight show of gas after perforating. Well was shut-in for 24 hours with a shut-in casing pressure of 100 psi. After flowing well to atmosphere through 2" outlet for 15 minutes, gas volume was too low to measure. Fruitland formation was non-productive.

Notice of Intention to abandon well will be forwarded.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
