Well No. 1 is located 990 ft. from [N] line and 990 ft. from [E] line of sec. 8
NE 1/4 Sec 8 T27N R13W AS
WILDCAT SAN JUAN 13NPM
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Wildcat San Juan New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 5235 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Rigged up cable tools and drilled cement plug, swabbed and bailed dry, casing and cement job tested OK. Drilling proceeded to 6115' where water was encountered; well was plugged back to 5440' with 117 sacks of regular cement, perforated 5402-16 with 28 Open Hole Jet shots, swabbed and bailed dry no show. Well plugged back to 5300' with 30 sacks of regular cement, rigged downcable rig. Now waiting on another rig to recover 7", 10-3/4" and 13-3/8" casing. We propose to plug back to the base of Pictured Cliff Formation, re-run 7" casing to top of Pictured Cliff and then shoot with SNG.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
