DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

E. H. Pipkin Well No. 2 was plugged and abandoned as follows on March 17, 1960, due to lack of commercial gas production possibilities:

1. Filled 1" tubing.
2. Spotted 40 sacks cement plug 1590-1705 and squeezed with 400 psi.
3. Filled hole with fluid.
4. Pumped 25 sacks of cement down 5-1/2" - 8-5/8" annulus to anchor pipe.
5. Removed wellhead and surface equipment.
6. Spotted 5 sacks of cement for surface plug (0-40') and erected dry hole marker.
7. Plug and abandonment operations by above procedure to permit possible future re-entry in the event other zones are discovered to be productive in the area.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
