NATURE OF RELEASE

Type of Release Injection Water	Volume of Release 12 bbls	Volume Recovered 10 bbls
Source of Release 3" Internally plastic coated steel line	Date and Hour of Occurrence 05/03/2006 06:00 AM	Date and Hour of Discovery 05/03/2006 06:00 AM
Was Immediate Notice Given? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> Not Required	If YES, To Whom? N/A	
By Whom? N/A	Date and Hour N/A	
Was a Watercourse Reached? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse. N/A	

If a Watercourse was Impacted, Describe Fully. *N/A

Describe Cause of Problem and Remedial Action Taken. *☐ Operations personnel were called to the 900 block of North Coleman at 6:00 am on 5/3/06 about a leak in the street. Upon arrival found a leaking injection line in the street serving well NHU #28-441. Line operates at approximately 720 psig and 2850 bbls/day. Fire Department had blocked city drainage system with sand so water would not run into drainage system. A small amount did enter the drainage system before sand was placed around it. Valves at the injection header at NHU Satellite #33 were shut and valves at NHU 28-441 were shut to isolate leak. The close proximity of a Texland line is believed to have interfered with the cathodic protection for the leaking line.

Describe Area Affected and Cleanup Action Taken. *☐ A small area in the 900 block of North Coleman had injection water along the curb. A vacuum truck was placed at the drainage system to keep water from entering it. Affected area was rinsed with water and hose water was captured and disposed of. 200 bbls of fresh water was used to dump down the city drainage system to make sure small amount that entered was washed away. Line was exposed and repaired, a small pin hole was found on the external portion of the pipe. Excavated dirt was removed and fresh backfill was used to fill the excavation. A sacrificial anode will be placed for the line and a new ground bed will be installed at NHU Satellite #33 to aid the cathodic protection for this line. A contractor will be called to repair damaged pavement to city specifications. No further work is planned at this site.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOC rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOC marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOC acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
