12/29/2017 Moved equipment to location. Opened the well. It had a slight vacuum on it. Filled in area around the wellhead where it had subsided. Cleared the location and located the anchors. Could not rig up due to high winds. The well did not have pipe in it. Installed the BOP with the backhoe and moved in the workstring.

1/3/2018 Rigged up. RIH with gauge ring. Sat down at 2355'. Called OCD and BLM. Believe there is an existing CIBP in the well. Pick up workstring and tagged up at 2553'. Stacked out with tubing weight. Circulated MLF and tested casing to 500#. Casing good. Spotted 25 sx cement at 2353' and POOH. Perforated 4 1/2" casing at 902'. Set packer at 583.2'. Pressured up 900# after trying 500# and held. Bled off pressure at the truck and retried several times. Could not squeeze perfs. POOH with packer and RIH with tubing to 972'. Spotted 25 sx across the perfs and POOH. Will tag in the morning.

1/4/2018 RIH and tagged below the perfs at 943'. Closed BOP and caught circulation. Closed in casing and pressured up to 800# and held. Called OCD and BLM. Spotted 25 sx cement at 943' with CaCl. WOC and tagged cement at 619'. Laid down remaining pipe and perforated at 146'. Established circulation and pumped cement down 4 1/2" casing to perfs at 146' and up the annulus to surface. Took 55 sx. Rigged down. Could not dig out the cement that was poured around the surface casing. Obtained permission to cut the wellhead off at surface level. Filled up both strings with less than 1 sack and installed ground level marker. Will road equipment out tomorrow.

1/5/2018 Move rig and equipment off location.
